## WHAT COUNTER PROVIDES

- Consistent, comparable, publisher/vendor-generated usage statistics

Welcome: **Guest User**

Thursday, June 07, 2007

You are at: Home

## Home

Welcome to ScholarlyStats - the online portal for library usage statistics. ScholarlyStats has been developed to provide information professionals with a single point of access to their vendor usage statistics. Providing *faster access* to consolidated data, it can help you to analyse usage of your online content *more easily* and *more effectively*.

ScholarlyStats delivers consolidated reports to libraries around the globe, providing a clearer view of usage of over **70,000 journals** and almost **450 databases** from **42 platforms** (and we are adding more all the time!). For an overview of the service, [click here](#).

### Existing User Log-in

[Activation Help](#)

### ScholarlyStats Benefits

- Single access portal for your usage statistics
- Demonstrate the value of online access
- Gain new insights into usage at your library
- Spend more time analyzing usage statistics and less time administering them

[FIND RELATED RECORDS](#) ⓘ

**Abstract:** The complete mitochondrial genome sequence of the parasitic nematode *Strongyloides stercoralis* was determined, and its organisation and structure compared with other nematodes for which complete mitochondrial sequence data were available. The mitochondrial genome of *S. stercoralis* is 13,758 by in size and contains 36 genes (all transcribed in the clockwise direction) but lacks the *atp8* gene. This genome has a high T content (55.9%) and a low C content (8.3%). Corresponding to this T content, there are 16 (poly-T) tracts of greater than or equal to 12 Ts distributed across the genome. In protein-coding genes, the T bias is greatest (76.4%) at the third codon position compared with the first and second codon positions. Also, the C content is higher at the first (9.3%) and second (13.4%) codon positions than at the third (2%) position. These nucleotide biases have a significant effect on predicted codon usage patterns and, hence, on amino acid compositions of the mitochondrial proteins. Interestingly, six of the 12 protein-coding genes are predicted to employ a unique initiation codon (TTT), which has not yet been reported for any other animal mitochondrial genome. The secondary structures predicted for the 22 transfer RNA (*trn*) genes and the two ribosomal RNA (*rrn*) genes are similar to those of other nematodes. In contrast, the gene arrangement in the mitochondrial genome of *S. stercoralis* is different from all other nematodes studied to date, revealing only a limited number of shared gene boundaries (*atp6-nad2* and *cox2-rrnL*). Evolutionary analyses of mitochondrial nucleotide and amino acid sequence data sets for *S. stercoralis* and seven other nematodes demonstrate that the mitochondrial genome provides a rich source of phylogenetically informative characters. In conclusion, the *S. stercoralis* mitochondrial genome, with its unique gene order and characteristics, should provide a resource for comparative mitochondrial genomics and systematics studies of

## Reports

### Publication Activity Report (for 11 profiles)

Select a profile:

For a Publication Activity Profile, this report contains the following data:

- A list of journals in the profile data (source journals and cited journals)
- Number of articles from the profile for each journal
- Number of citations from the profile to each journal
- Number of full text links to the journal

### Vendor Usage Report (for 39 vendors)

For each vendor listed in Vendor Usage, this report contains the following data:

- Number of journals
- Number of published articles (in your profiles)
- Number of cited journals (in your profiles)
- Number of full text links

### Vendor Usage: Most Downloaded Journals (for 39 vendors)

Lists the top 100 downloaded journals.

### Vendor Usage: Most Downloaded Providers (for 39 vendors)

Include top 50 titles for each provider.

Lists the top 20 providers based on the number of downloads. Optionally, you can include the top downloaded journals for each provider.

This screen gives you many options! For example you can:

- Search across 'popular databases' to find journal articles, books and more, on your topic
- Click on a topic in the left hand menu to see and search key databases in that field
- Focus even further: use the drop down in the left hand menu to choose the 'Subjects' option; choose your broad subject area from the 'Subject' drop down, and then click on a sub-category to see and search the related resources

### SELECT STATISTICS TO VIEW

You may choose a set of reports to view by selecting one of the following options:

**Your Library Reports**

View analytical reports for lists you have uploaded into your account. These reports can be compared against our Ulrich's Universe or Ulrich's Core, against a Peer Group, or against an Aggregator database.

**Comparison & Overlap Analysis Reports**

Compare two or more of your uploaded lists. You will have the ability to do a direct one-to-one file comparison, or compare one list to multiple lists to identify gaps and redundancies.

**Aggregator Comparison Reports**

View analytical reports for Aggregator Databases. You will have the ability to compare up to five at one time or compare individual databases to either the Ulrich's Universe or Ulrich's Core.

**Peer Group Reports**

View analytical reports for selected Peer Groups of Institutions. Peer Group consists of institutions who reflect similar demographics, including 12-month FTE, region of the U.S. or Canada, and Carnegie Classification (U.S. libraries only).

**Top Publisher Reports**

View analytical reports for more than 100 serials publishers along with their imprints and divisions. You may compare publishers' offerings to either Ulrich's Universe or Ulrich's Core.
