

Magpies are easily distracted by the new and the eye-catching, ignoring other relevant material.

Ostriches avoid looking for information, especially if it might change what they already know.

Giant pandas rely too much on a single source of information, even if other sources are available.

Cuckoos expect others to do all the work for them.

St. Paul's Information Behaviour Typology: What Kind of Animal Are You?

Giant anteaters use several sources of information, but do not spend too long with each source.

Vultures are scavengers, not hunters, relying on scraps of information they find lying around.

Squirrels rely on information which they have previously found and stored away.

Orb weaver spiders rely exclusively on the web!
