- Ubiquitous computing
- Ubiquitous access to information
- Personalization
- Portals
- Information Architecture
- Open Access
- Search Mechanisms
- Institutional Repositories
- What can be done?

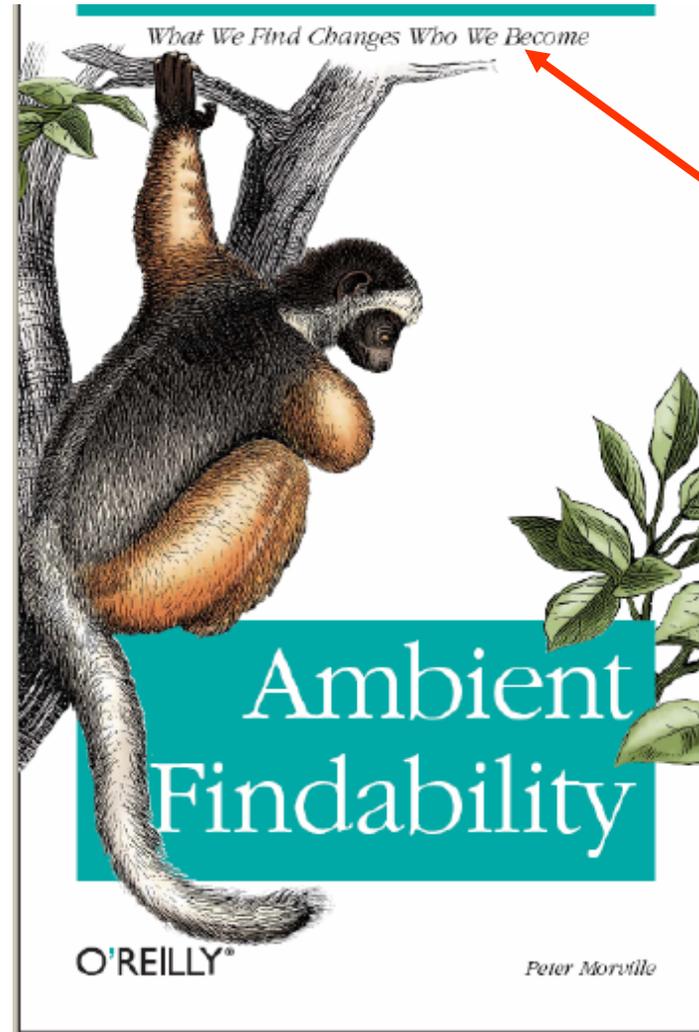

# How ICTs could really change the world

- Peer-to-peer or device-to-device networks
- Precise local spatial data embedded in every device and application
- Sensor fusion – integration of devices that measure temperature, movement, pressure, acceleration, flow, electrical use, radioactivity, chemical composition
- Unique identity systems

Source: Gage, 2002

# “What we find changes who we become”

By integrating a mobile phone and Palm Powered organizer with wireless email, text messaging, and web browsing, the Treo connects me with global communication and information networks. I can make a phone call, send email, check the weather, buy a book, learn about Newport, and find a restaurant for lunch. The whole world is accessible and addressable through this 21st Century looking glass in the palm of my hands.”  
(p. 1)

We're creating all sorts of new interfaces and devices to access information, and we're simultaneously importing tremendous volumes of information about people, places, products, and possessions into our ubiquitous digital networks. (p. 2)

- There's a company called Ambient Devices that embeds information representation into everyday objects: lights, pens, watches, walls, and wearables. You can buy a wireless Ambient Orb that shifts colors to show changes in the weather, stock market, and traffic patterns based on user preferences you set on a web site. (p. 3)

- From the highways of Seattle and Los Angeles to the city streets of Tokyo and Berlin, embedded wireless sensors and real-time data services for mobile devices are enabling motorists to learn about and route around traffic jams and accidents. (p. 3)

- Delicious Library's social software turns an iMac and FireWire digital video camera into a multimedia cataloging system. Simply scan the barcode on any book, movie, music, or video game, and the item's cover appears on your digital shelves along with tons of information from the Web. This sexy, location-aware, peer-to-peer, personal lending library lets you share your collection with friends and neighbors. (p. 3)

- You can buy a watch from Wherify Wireless with an integrated global positioning system (GPS) that locks onto your kid's wrist, so you can pinpoint his location at any time. A nifty “breadcrumb” feature shows where your child has wandered over the course of several hours. Similar devices are available in amusement parks such as Denmark's Legoland, so parents can quickly find their **lost** children. (p. 3)

- Manufacturers such as Procter & Gamble have already begun inserting radio-frequency identification tags (RFIDs) into products so they can reduce theft and restock shelves more efficiently. These tags continue to function long after products leave the store and enter the home or business. (p. 4)

- At the Baja Beach Club in Barcelona, patrons can buy drinks and open doors with a wave of their hand, compliments of a syringe-injected, RFID microchip implant. The system knows who you are, where you are, and your exact credit balance. Getting “chipped” is considered a luxury service, available for VIP members only. (p. 4)

# Internet bookmobile – Brewster Kahle

# Internet bookmobile – Brewster Kahle

- Integration of electronic information services with other information-based services
- Personalization of electronic information services

- Removal of temporal and spatial barriers
- Remote access to information sources and services on a 24X7 basis from anywhere in the world
- “Instant gratification”

- Ownership dictates use of centralized IM models
  - “One source – one user”
- Impact of ICTs on IM: Centralized → Distributed
  - “One source – multiple users”
- Economic models: Centralized management → Personalization

- Personalization
  - “. . .selecting and filtering information objects or products for an individual by using information about the individual.”

- Explicit / implicit personalization
- Active / passive personalization
- Personalization of display environment
- Personalization of collections / content
- Personalization of services

# Portal definition

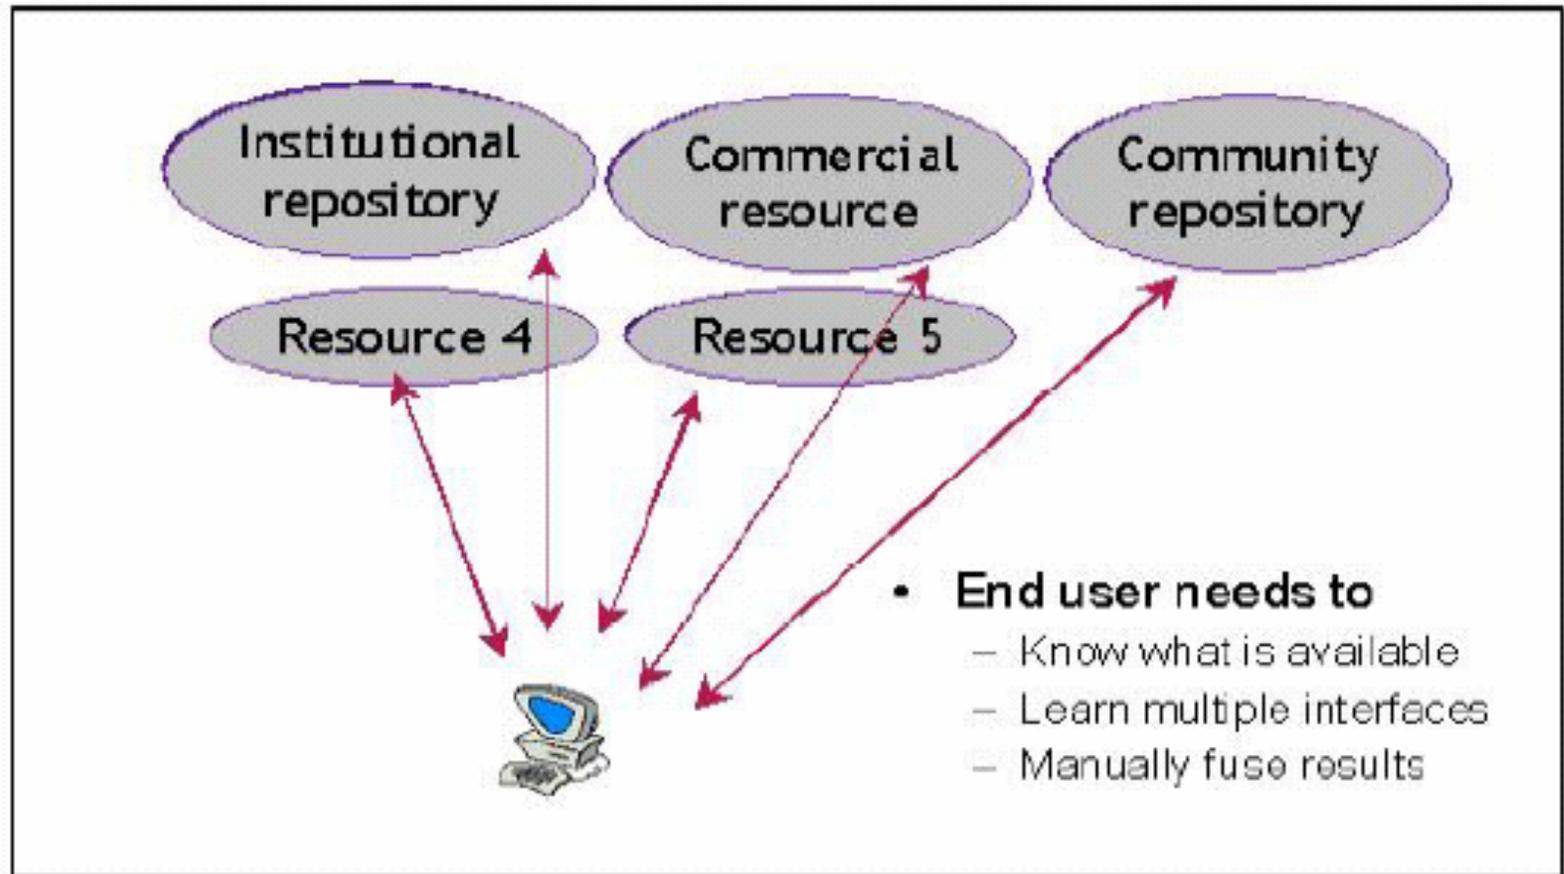

- Information hub
- Entry point to information sources and services
- Personalized sources based on personal demand or specific roles
- Collections organized to help different users

- Portal is not a strategy replacing effective use and management of information sources in a networked environment, but, rather, is part of such a strategy (Dempsey, 2003)
- Portal is an application that provides metasearch and support services (ARL)

## Portal issue

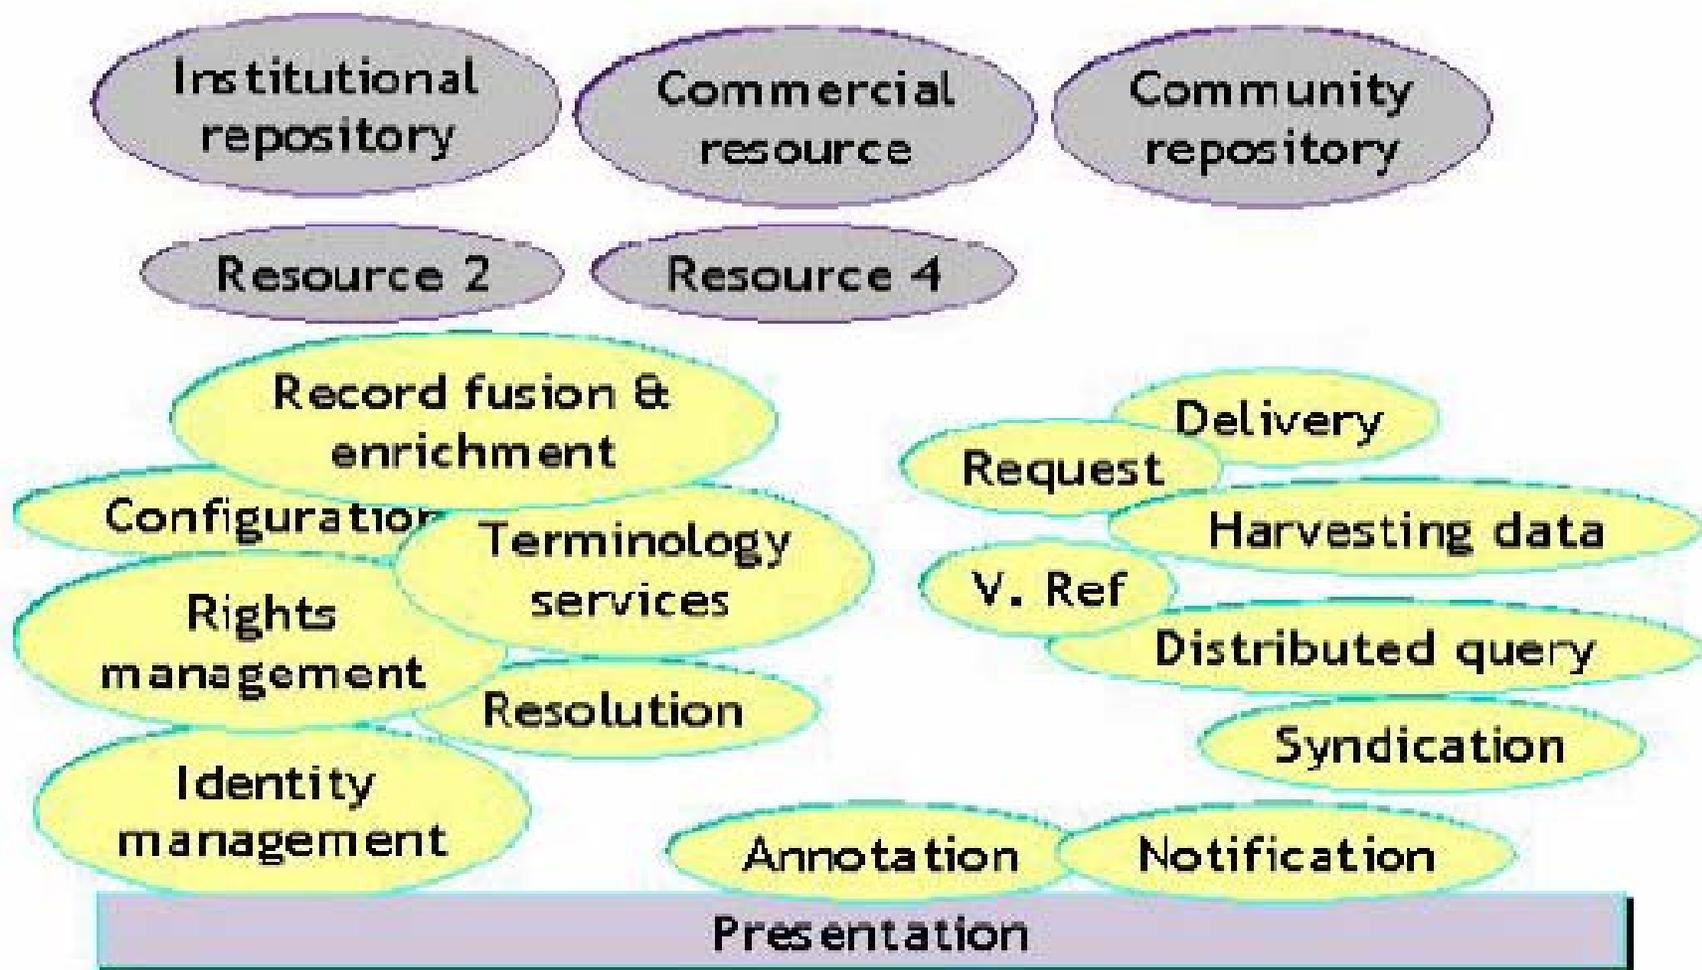

Source: Dempsey, 2003

# A portal grid

	Static	Custom
Mediation		
Presentation		

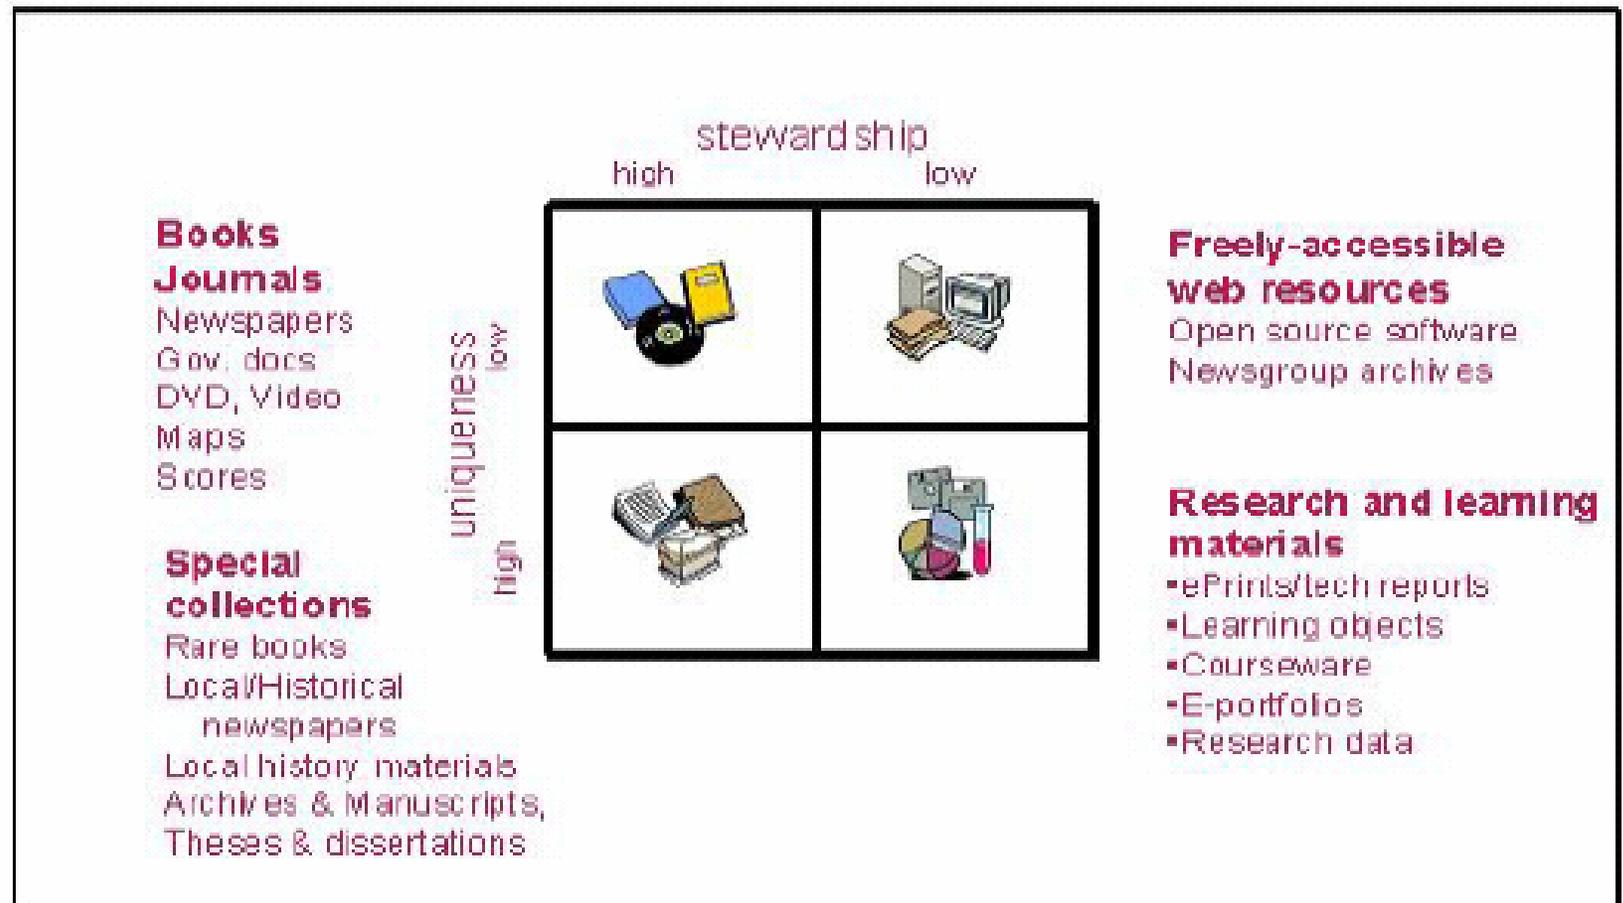

Source: Dempsey, 2003

# Portal services

Source: Dempsey, 2003

# Collections grid

Source: Dempsey, 2003

- Recognize users when they log on and personalize the content based on their rights and privileges (smart cards, biometric features)
- Need to move from “resource-centric” approach to “relationship-centric” approach (Carl Lagoze)
- Interoperability
  - with library automation systems, student information systems, financial systems, etc.
  - With e-banking, e-commerce, e-health, e-government, e-(l)earning systems

- Available vs. Accessible
- George Miller. “Magic Number Seven: Plus or Minus Two”
- Top Ten web design mistakes of all times

1. Bad search
2. PDF files for online reading
3. Not Changing the Color of Visited Links
4. Non-Scannable Text
5. Fixed Font Size

6. Page Titles With Low Search Engine Visibility
7. Anything That Looks Like an Advertisement
8. Violating Design Conventions
9. Opening New Browser Windows
10. Not Answering Users' Questions

# Open Access

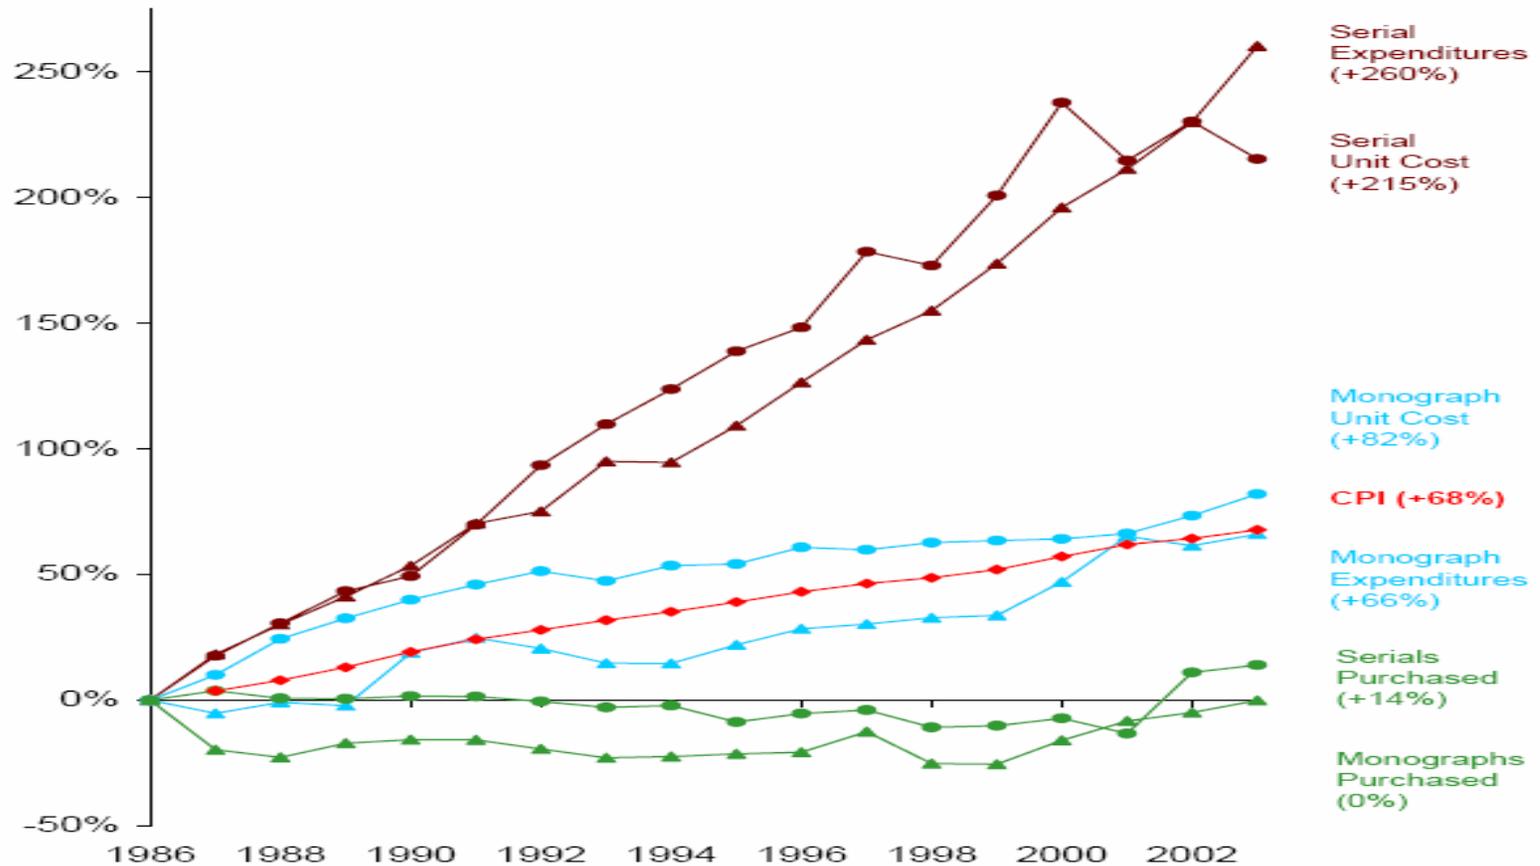

- 24,000 refereed journals
- 2.5 million articles per annum
- Journals are expensive
- Economic model is based on subscription

# Increases in Journal Subscription Prices

Monograph and Serial Costs  
in ARL Libraries, 1986-2003

Source: *ARL Statistics 2002-03*, Association of Research Libraries, Washington, D.C.  
Copyright © 2004 Association of Research Libraries

# Vicious Circle

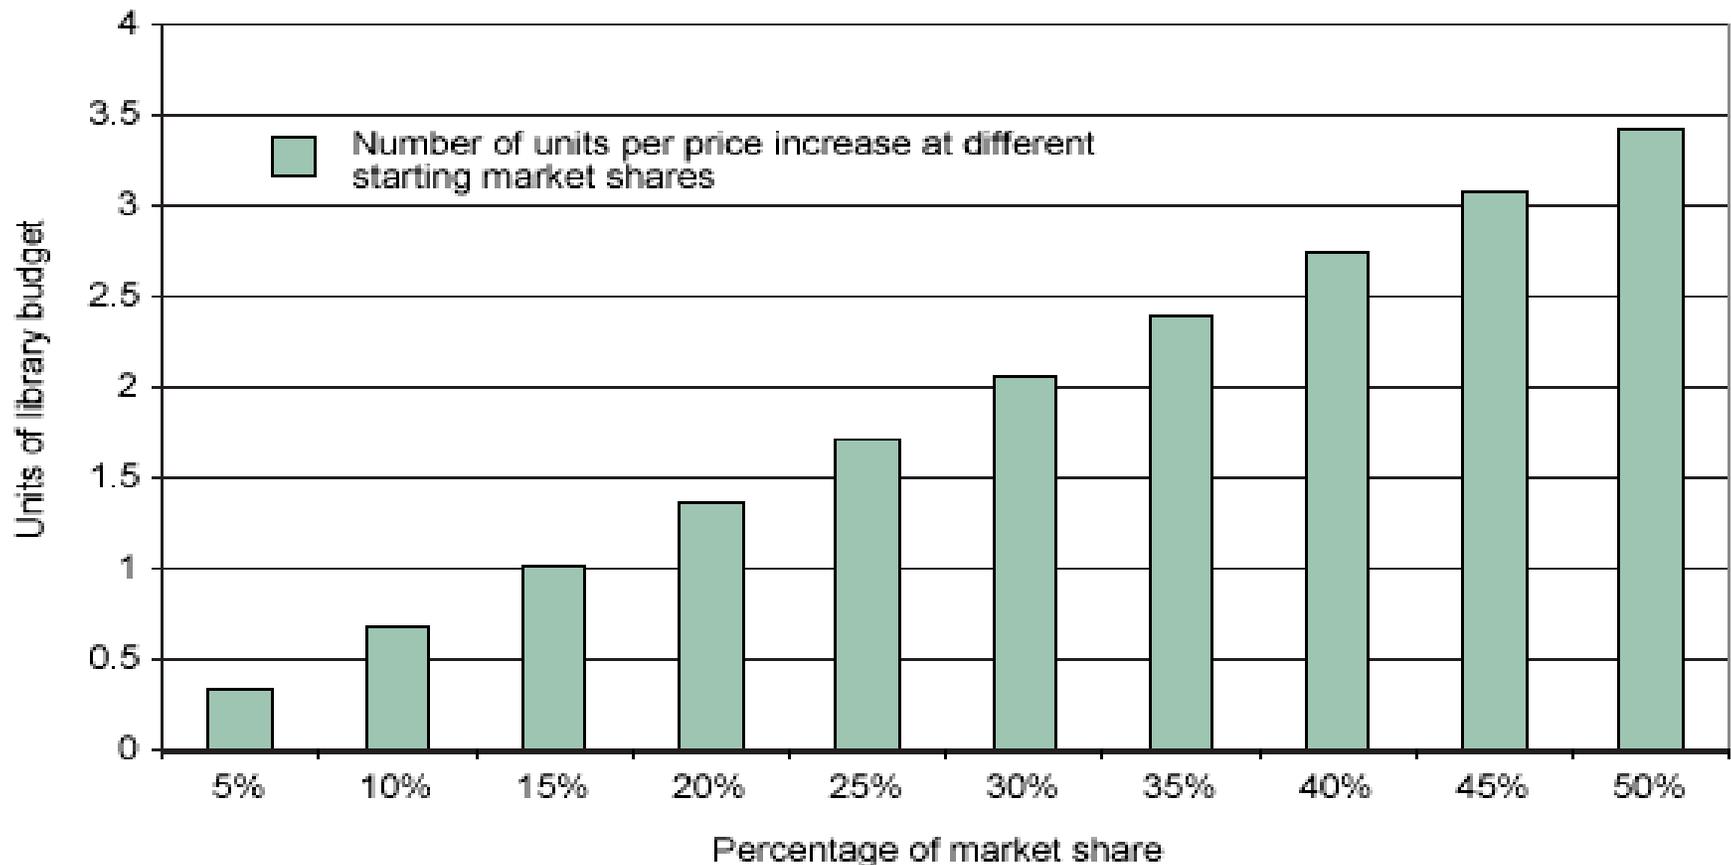

- Increase in journal subscription prices
- Some libraries cancel their subscriptions
- To make up lost income, publishers increase journal subscription prices further
- Some more libraries cancel their subscriptions
- To make up lost income, publishers increase journal subscription prices further
- Some more libraries cancel . . .

# Some publishers have the potential to increase their market share by increasing their prices!

Figure 5

Impact of price increases on available library budgets

*Credit Suisse First Boston, Scientific, Technical and Medical Publishing, p.26*

Source: House of Commons Select Committee on Science & Technology Tenth Report, 2004

- Publishers can become monopolies very easily
- Journal prices are “inelastic”
- *Tetrahedron Letters*
  - 1974 → 200 USD
  - 1997 → 7176 USD
  - 2005 → 12,204 USD
- Libraries spending %30-%50 of their budgets for Elsevier journals

- Public money used at three stages:
  - To fund the research project
  - to pay the salaries of academics who carry out peer review for no extra payment
  - to fund libraries to purchase scientific publications
- "what other business receives the goods that it sells to its customers from those same customers, a quality control mechanism provided by its customers, and a tremendous fee from those same customers?"

# Open Access definition

1. “. . . free, irrevocable, worldwide, right of access to, and a license to copy, use, distribute, transmit and display the work publicly . . .
2. A complete version of the work . . . is deposited (and thus published) in at least one online repository . . . maintained by an academic institution, scholarly society, government agency, or other well-established organization that seeks to enable open access, unrestricted distribution, interoperability, and long-term archiving.”

Source: **Berlin Declaration on Open Access to Knowledge in the Sciences and Humanities**  
<http://www.zim.mpg.de/openaccess-berlin/berlindeclaration.html>

- Self-archiving
  - Right of researchers to deposit their published articles in their web sites or in free electronic archives
  - Right to distribute those articles, free of charge, over the Internet
- Open Access Journals
  - Free access to electronic articles
  - Different (eg, “author pays”) financial models to pay for review and publication expenses
  - Not limiting access to articles by copyright
  - Encouraging distribution of research results through the Internet

- Copyright / licensing
- Attitudes of publishers
  - 92% of publishers give authors permission to self-archive their pre- and post-print articles
  - Yet only 20% of articles are currently open access
- Attitudes of authors
- Development of institutional repositories (IRs)
- Lack of mechanisms to search individual web sites and IRs

Proportion of journals already formally giving their **green light** to author/institution self-archiving (**already 92%**) continues to grow:

Green light to self-archive:	Journals	%	Publishers	%
	8919	(100%)	107	(100%)
Neither yet	695	8%	34	32%
Preprint	2470	+27% (= <b>92%</b> )	7	+7% (= 69%)
Postprint	5754	65%	66	62%
				Source: Brody & Harnad, 2004

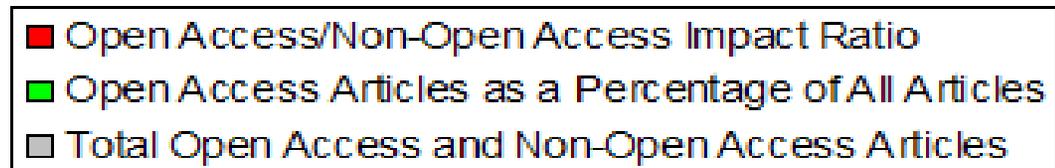

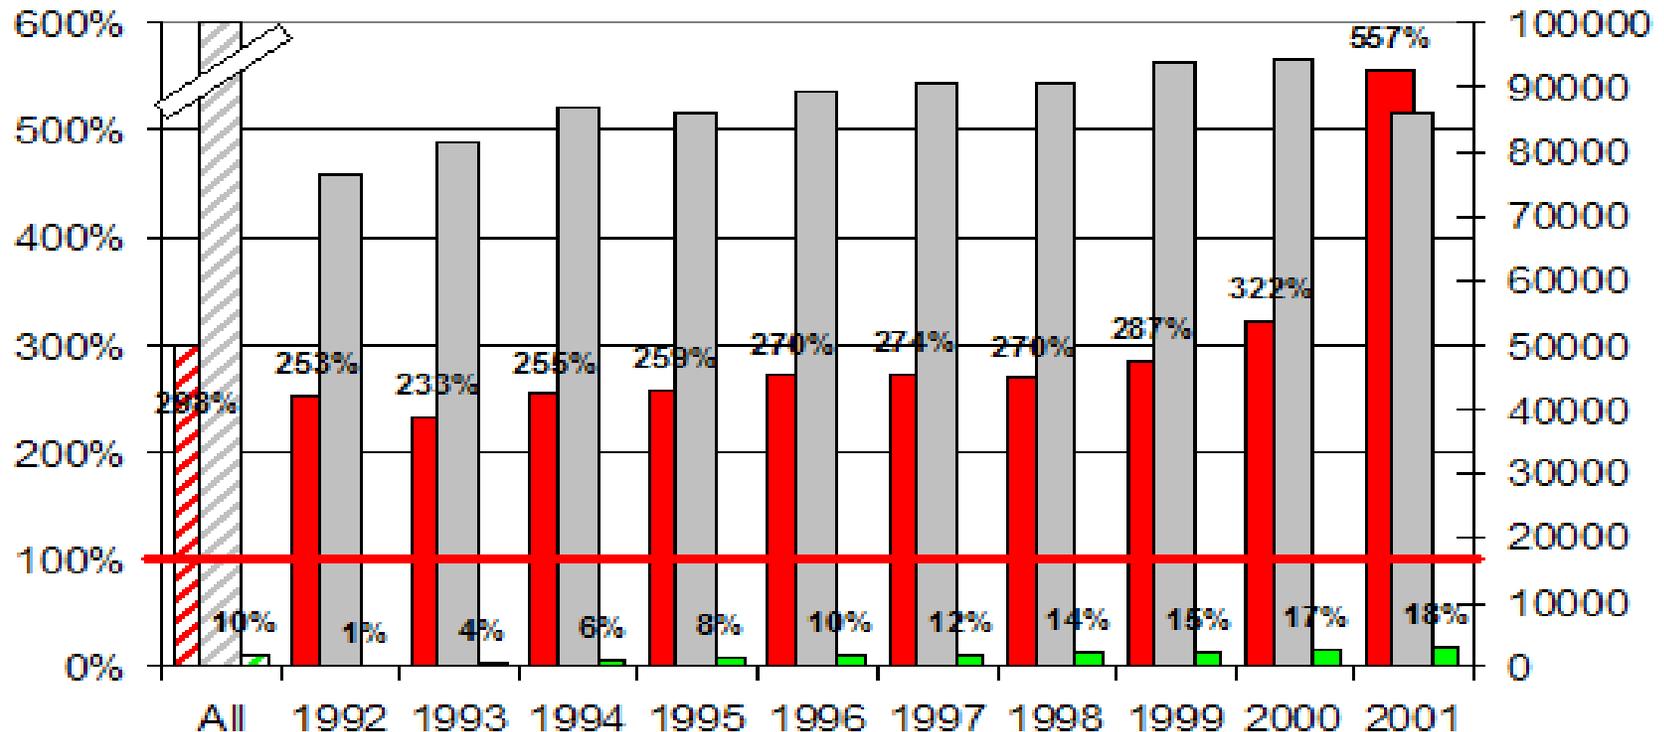

- Online articles get cited more often (336% more) (Lawrence, 2001)
- Relationship between Research Assessment Exercise (RAE) scores in the UK and the average number of citations
- Open Access articles get cited more often

# Citation Rates of Open Access Articles

**Open Access vs. Non-Open Access Citation Impact Ratios  
All Physics Fields**

Source: Harnad & Brody (2004)

# Why is it important to increase research impact?

- The UK is losing around £1.5 billion (or \$2.7 billion) annually in the potential impact of its scientific research expenditure because of the limitations of the current academic publishing environment. (Stevan Harnad)

## 1.5 billion lost annually in potential return on British science

The UK is losing around £1.5 billion annually in the potential impact of its scientific research expenditure, according to one of the key figures in the global open

access publishing movement. Professor Stevan Harnad, Moderator of the American Scientist Open Access Forum and Professor of Cognitive Science at the University of Southampton's School of Electronics and Computer Science, has calculated the potential return on the investment in scientific research findings that are being lost to the UK each year through the limitations of the current academic publishing environment.

Source: [www.eprints.org](http://www.eprints.org)

# Open Access Journals

- Developed as a reaction to high subscription prices
  - BioMed Central, Public Library of Science (PLOS) initiatives
- No subscription is needed to get access to such journals
- Review and publication expenses are borne by authors or institutions that funded research
- 1816 journals in various subjects
- 7.5% of all refereed journals
- Citation rates of Open Access journals increasing
- Very few OA journals get indexed and abstracted by traditional A&I journals

Browse Institutions / Data Providers

Future Search Improvements

Background / Project Description

Information for Potential Data Providers

Staff

**OAster** is a project of the [University of Michigan Digital Library Production Service](#). Our goal is to create a collection of freely available, previously difficult-to-access, academically-oriented digital resources ([what are digital resources?](#)) that are easily searchable by anyone.

**It is possible that search may be up and down during the month of October as we install new software, switch servers and get our mirror servers online. We apologize for the inconvenience. Please send comments and questions to Kat Hagedorn: [oaister@umich.edu](mailto:oaister@umich.edu)**

**OAster will not be updated during the month of October. We will resume updating the first week in November.**

Well-behaved repositories (without XML or UTF-8 errors) are updated on a weekly basis on Wednesdays. All other repositories are updated the first week of a month.

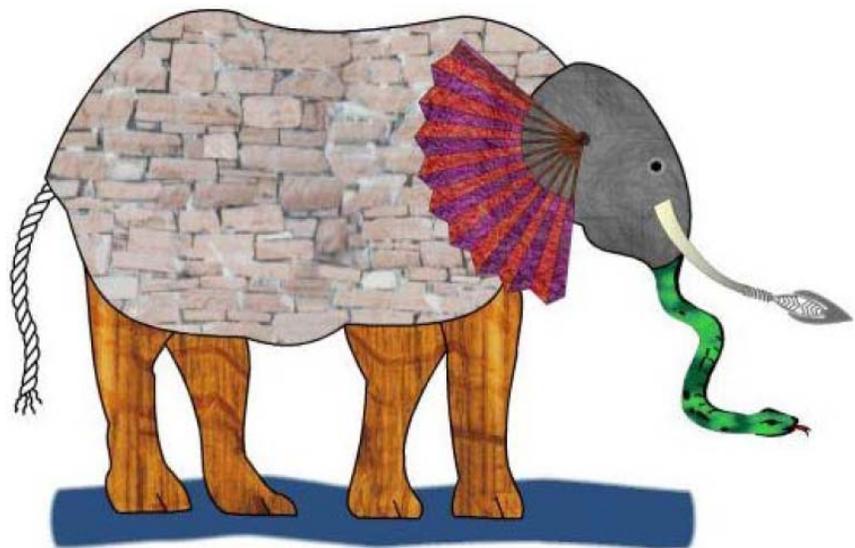

[Go to search now...](#)

**5,914,431 records from 536 institutions**  
(updated 30 September 2005)

**New institutions harvested recently:**  
DSpace at Wesleyan University // TU Berlin  
Digitales Archiv (OPUS) // University of South Carolina (USC) University Libraries Digital Collections

**140 new archives and 1 million new documents added in the last 8 months**

- Digital collections and services that record and preserve the intellectual products of one or more universities / institutions

# Publication types in IRs

- Articles published in refereed journals
  - Pre-prints
  - Post-prints
- Theses & dissertations
- Technical reports
- Books
- Learning objects
- Supplementary materials (data, images, etc.)
- Open Access journals
- Working papers
- . . .

# Harvesting Model

Source: Owen et al. (2004)

# What can be done?

- Watch the developments in ICTs
- Provide ubiquitous access to information within RTO (read NATO) through personal, local, regional and international networks using wired/wireless devices, GSMs, laptops, etc.
- Create and maintain RTO-wide portal(s)
- Provide personalized access to information services through portals
- Pay attention to Information Architecture (read usability) issues: “available” does not necessarily mean readily “accessible”
- Create effective search mechanisms

# What can be done? (cont'd)

- Increase the “awareness” of OA within the RTO community
- Make publicly-funded research results and documentation available to public free of charge
- Create “crosswalks” between different metadata schemes used within RTO to improve interoperability and metadata harvesting
- Create an RTO-wide institutional repository for unclassified documents and make it harvestable by search engines such as OAlster and Google Scholar
- Make OA a mandatory requirement to fund panel activities (if applicable)
- Increase the research impact of RTO publications through OA and make them easily “findable” and accessible
- And remember: “What we find changes who we become.”

# “What we find changes who we become”
