# Research data management in Spain: results from a DATASEA project survey
## curation of research data is a hot topic today

Surveys build a realistic knowledge base on a specific situation

**Data Audit Framework:** The Model for UK

**Parse Insight:** The results for Data and publications in Europe

**Datasea:** The Spanish situation

**METHODS** 40 questions were emailed to 3 public universities and 2 hospitals

## RESULTS

Coincident= ✅   Not coincident= ❌   Not appear= 🟡

| | Main issues in Datasea<br>607 respondents about data, mainly male researchers | Parse.Insight for data and publications<br>1,389 respondents from researchers, mainly european from UK | Datares<br>296 respondents about data, mainly librarians |
|---|---|---|---|
| Major disciplines: Life Sciences (39%) | | ❌ | ❌ |
| Does your project have a data plan?: Not really, only for participant's anonymization and how to storage the data | | ✅ | ✅ |
| Storage: 80% keep their current data either on local computers or on machines that collect data | | ✅ | ✅ |
| Access methods for reusing: personal contacts, Google and institutional database | | 🟡 | 🟡 |
| Barriers for sharing: legal issues (46%) and possible misuse (42%) | | ✅ | 🟡 |
| Infrastructures for sharing: REAL, institutional repository (53%); IDEAL, infrastructure should be by discipline 60%) | | 🟡 | ✅ |
| Motivation for sharing:<br>- re-analysis of existing data<br>- advancement of science | | ✅ | 🟡 |
| Services of their organization: they do not know | | 🟡 | ❌ |

## CONCLUSIONS

It's very difficult to compare different surveys. In general, Spain follows the general trends and data are not open widely

### Our data are in risk
### Urgent actions:
We need advocacy for researchers and training for librarians
