## CONTEXT

*International Journal of Computers Communications & Control (IJCCC)* is an open access peer-reviewed journal publishing original research papers and it is considered by professionals, academics and researches as one of the main sources of knowledge in the integrated solutions in **computer-based control and communications, computational intelligence methods and soft computing, and advanced decision support systems fields.**

## OBJECTIVE

The main aim of this contribution is to develop a **bibliometric analysis to evaluate the performance and conceptual evolution of the International Journal of Computers Communications & Control (IJCCC) from 2015 to 2019.** The analysis is developed using **SciMAT.**

## 2. METHODOLOGY

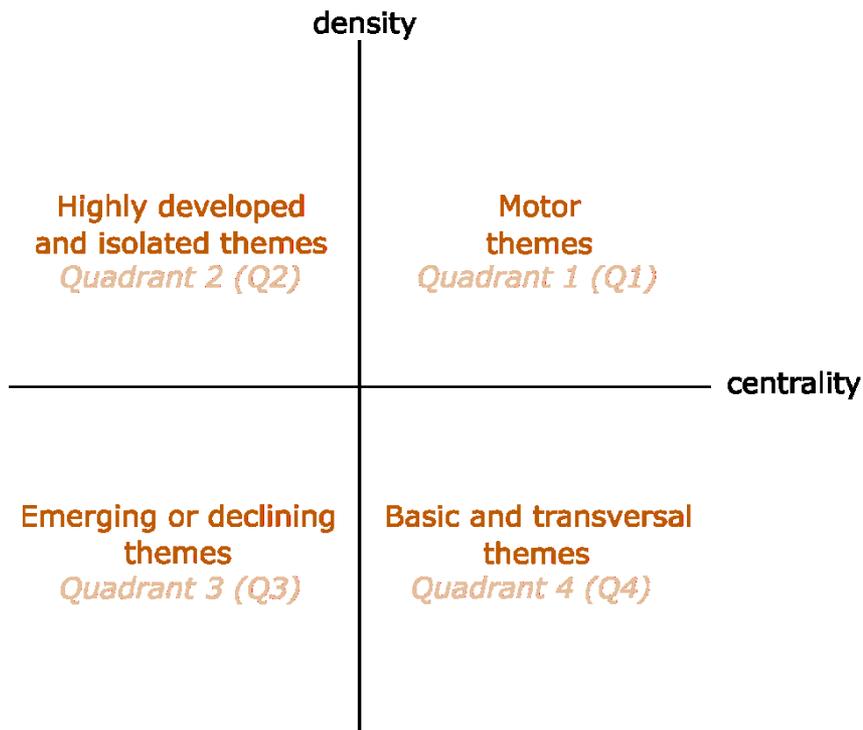

### SOFTWARE TOOL

**SciMAT** was employed to develop a longitudinal conceptual science mapping analysis based on co-words bibliographic networks.

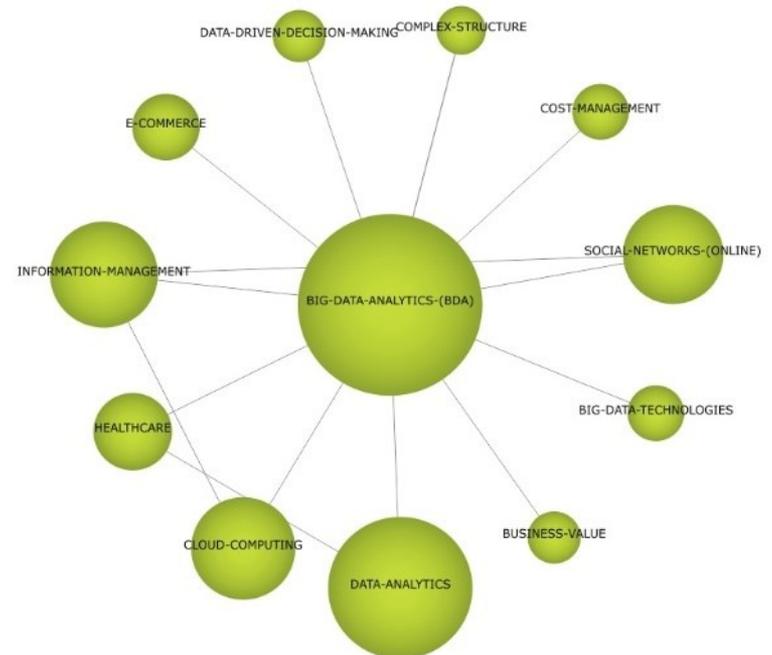

### METHODOLOGY STAGES

- 1. Detection of the research themes.** **Co-word analysis**, followed by a **clustering** of keywords to topics/themes. The similarity between the keywords is assessed using the equivalence index.
- 2. Visualizing research themes and thematic network.** **Strategic diagram** and **thematic network** (centrality and density). Research themes mapped in a two-dimensional strategic diagram and classified into four groups (Figure 1): i) motor, ii) basic/transversal, iii) highly developed-isolated, and iv) emerging/declining
- 3. Performance analysis.** Relative contribution of the research themes to the whole research field: number of published documents, number of **citations**, and different types of bibliometric indices (**h-index**).

## SUMMMARY

- An amount of **314 documents (articles)** were retrieved from the **WoS**. This articles achieved **1.093 cites and 2.094 keywords**.
- The corpus was evaluated in a single five-years period.
  - 2015: 75 documents, 373 cites and 468 keywords.
  - 2016: 64 documents, 283 cites and 359 keywords.
  - 2017: 59 documents, 202 cites and 416 keywords.
  - 2018: 59 documents, 157 cites and 445 keywords.
  - 2019: 57 documents, 78 cites and 406 keywords.
- The impact achieved is summarized in the following indicators:
  - Average citations per publication: 1,08
  - Sum of Times Cited (without self-citations): 1.093 (963)
  - Citing articles (without self-citations): 834 (726)
  - h-index: 14 publications

# CONCLUSIONS

## MAIN CONCLUSION

- In view of the results from the performance and science mapping analysis, two main research themes groups were identified. The first group is the most productive themes (NEURAL-NETWORKS, WIRELESS-NETWORKS, WIRELESS-SENSOR-NETWORK and MEMBRANE-COMPUTING) covered in the last five years and the second one is the most cited themes (MULTI-CRITERIA-DECISION-MAKING, EVIDENTIAL-REASONING, SIMILARITY-MEASURES and FUZZY-LOGIC-APPROACH).

## FUTURE WORKS

- A yearly analysis could be carried out taking into account a wider time span and enriching the analysis with the main authors, organizations, countries, among others.
- Furthermore, it will allow to identify the evolution of the themes and its position in the quadrants.
