Group 3

OAI protocol beyond discovery metadata

Workshop on OAI and peer review journals in Europe
Geneva, Switzerland – March 22nd to 24th 2001

Herbert Van de Sompel

Simeon Warner

Gary Li

Andrei Popescu-Belis

Fabio Asnicar

Antoinette Lemaire

Thomas Krichel

F.Nesti

M.Sandfaer

Leo Waaijers

N.Grygierczyk

T.Simko

- the current OAMH protocol in the preprint context
 - discovery metadata
- other uses of OAMH protocol in the preprint context?
 - certification metadata
 - archival metadata
 - usage metadata
 - author metadata
 -

Systems for scholarly communication {Roosendaal & Geurts}

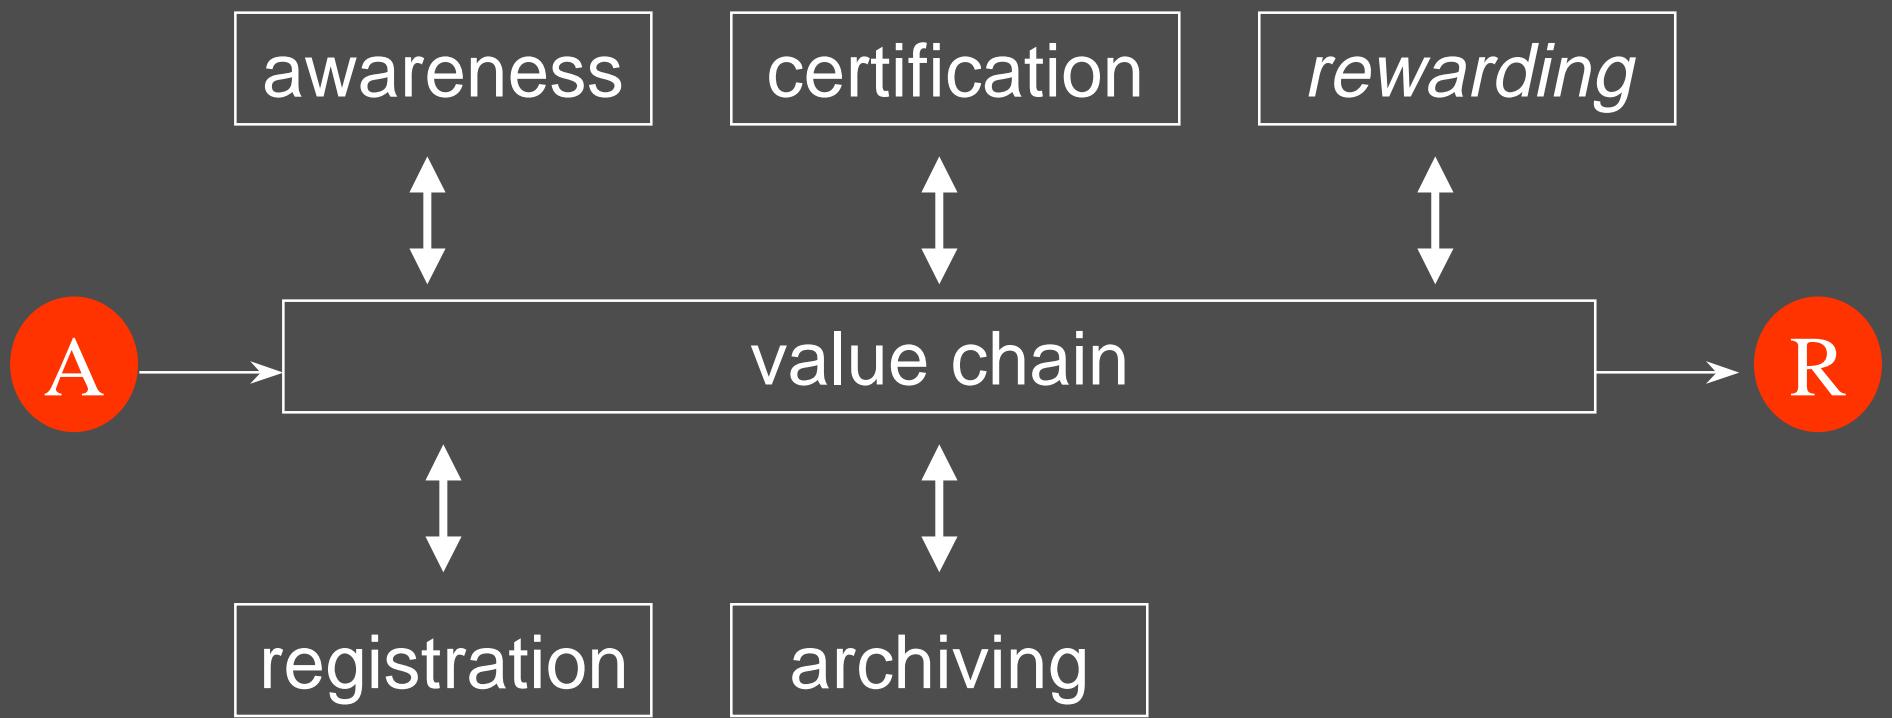

registration	claiming a new finding
certification	certifying the claim
awareness	ensure information throughput
archiving	preserving the heritage

Systems for scholarly communication {Roosendaal & Geurts}

registration	claiming a new finding
certification	certifying the claim
awareness	ensure information throughput
archiving	preserving the heritage
<i>rewarding</i>	<i>evaluating & rewarding performance</i>

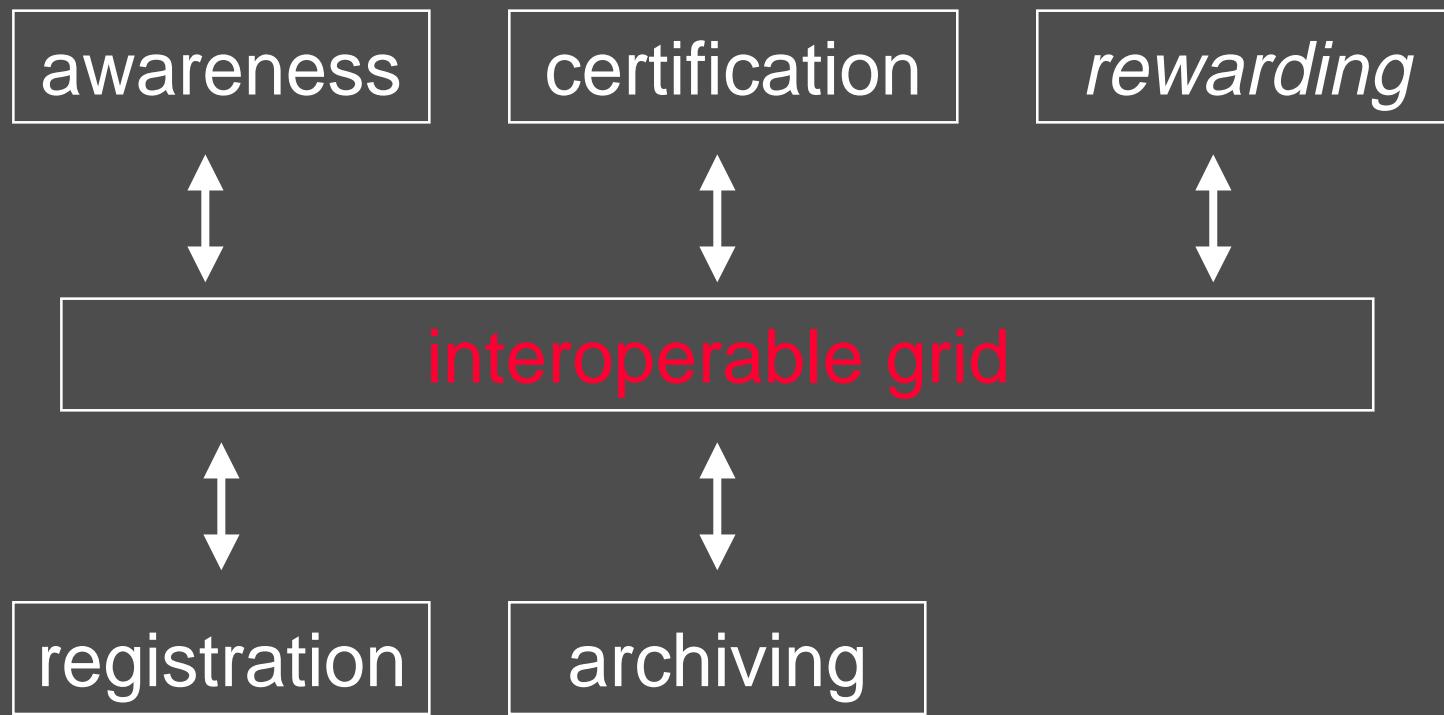

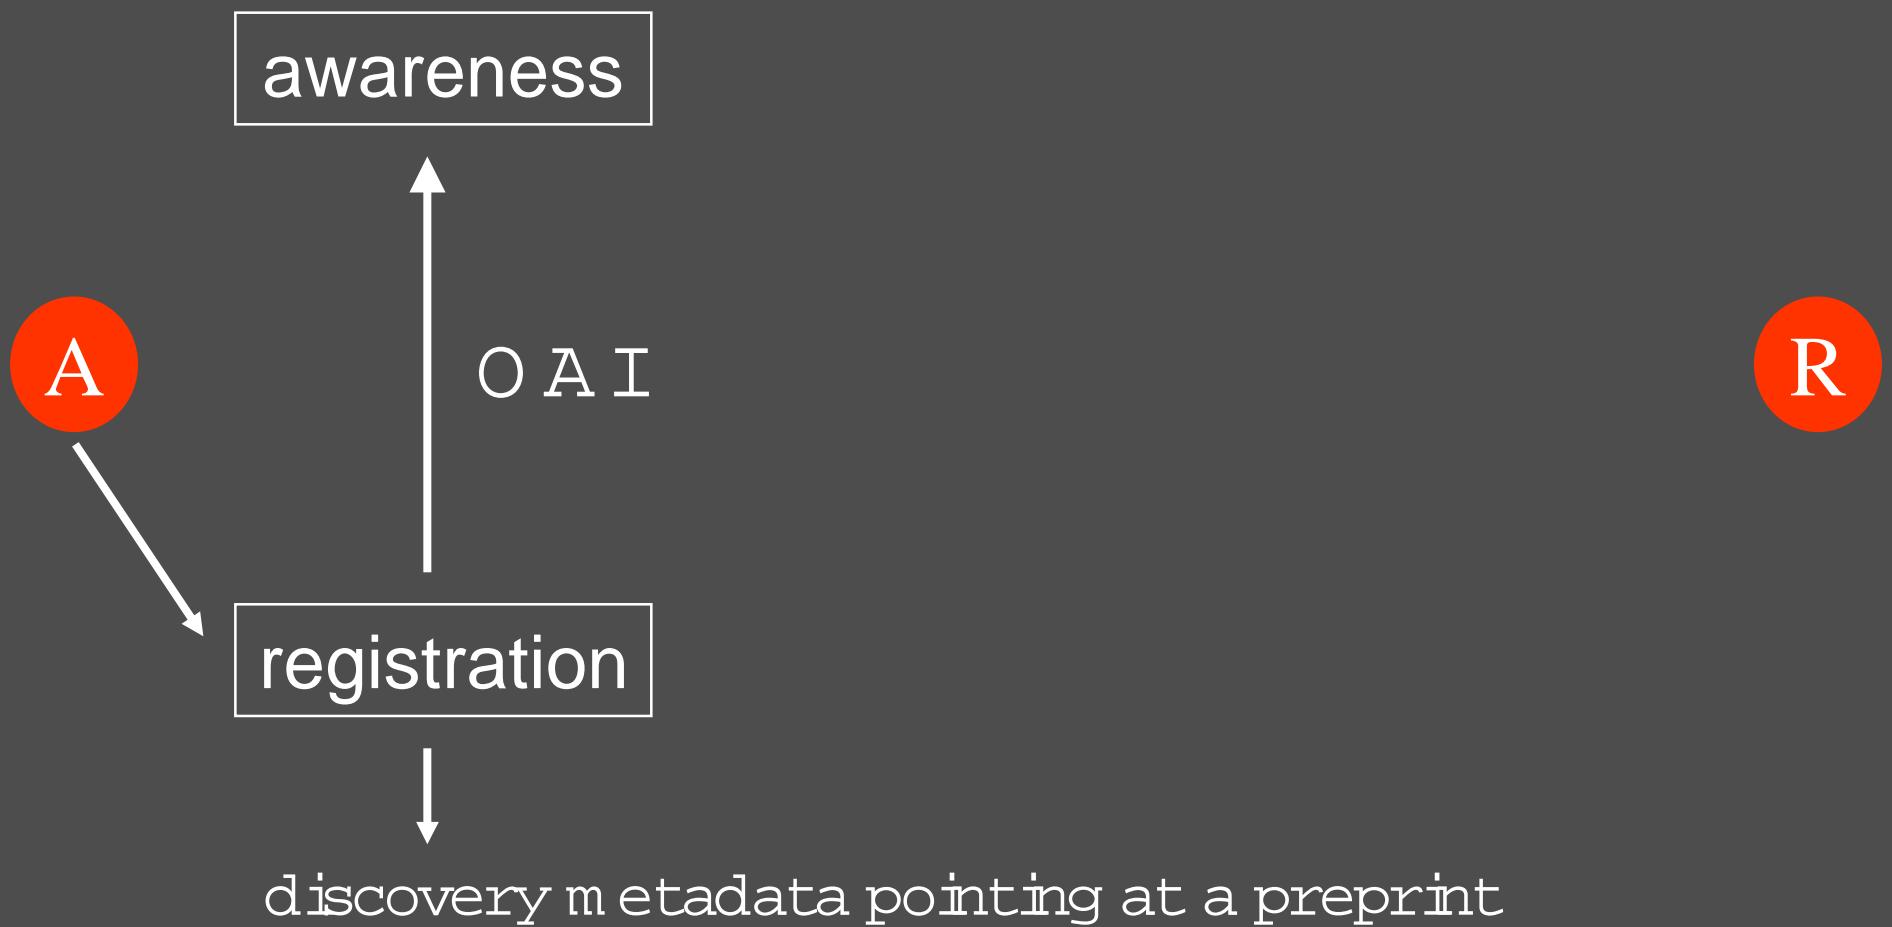

In a fully electronic scholarly communication system , the implementation of the functions

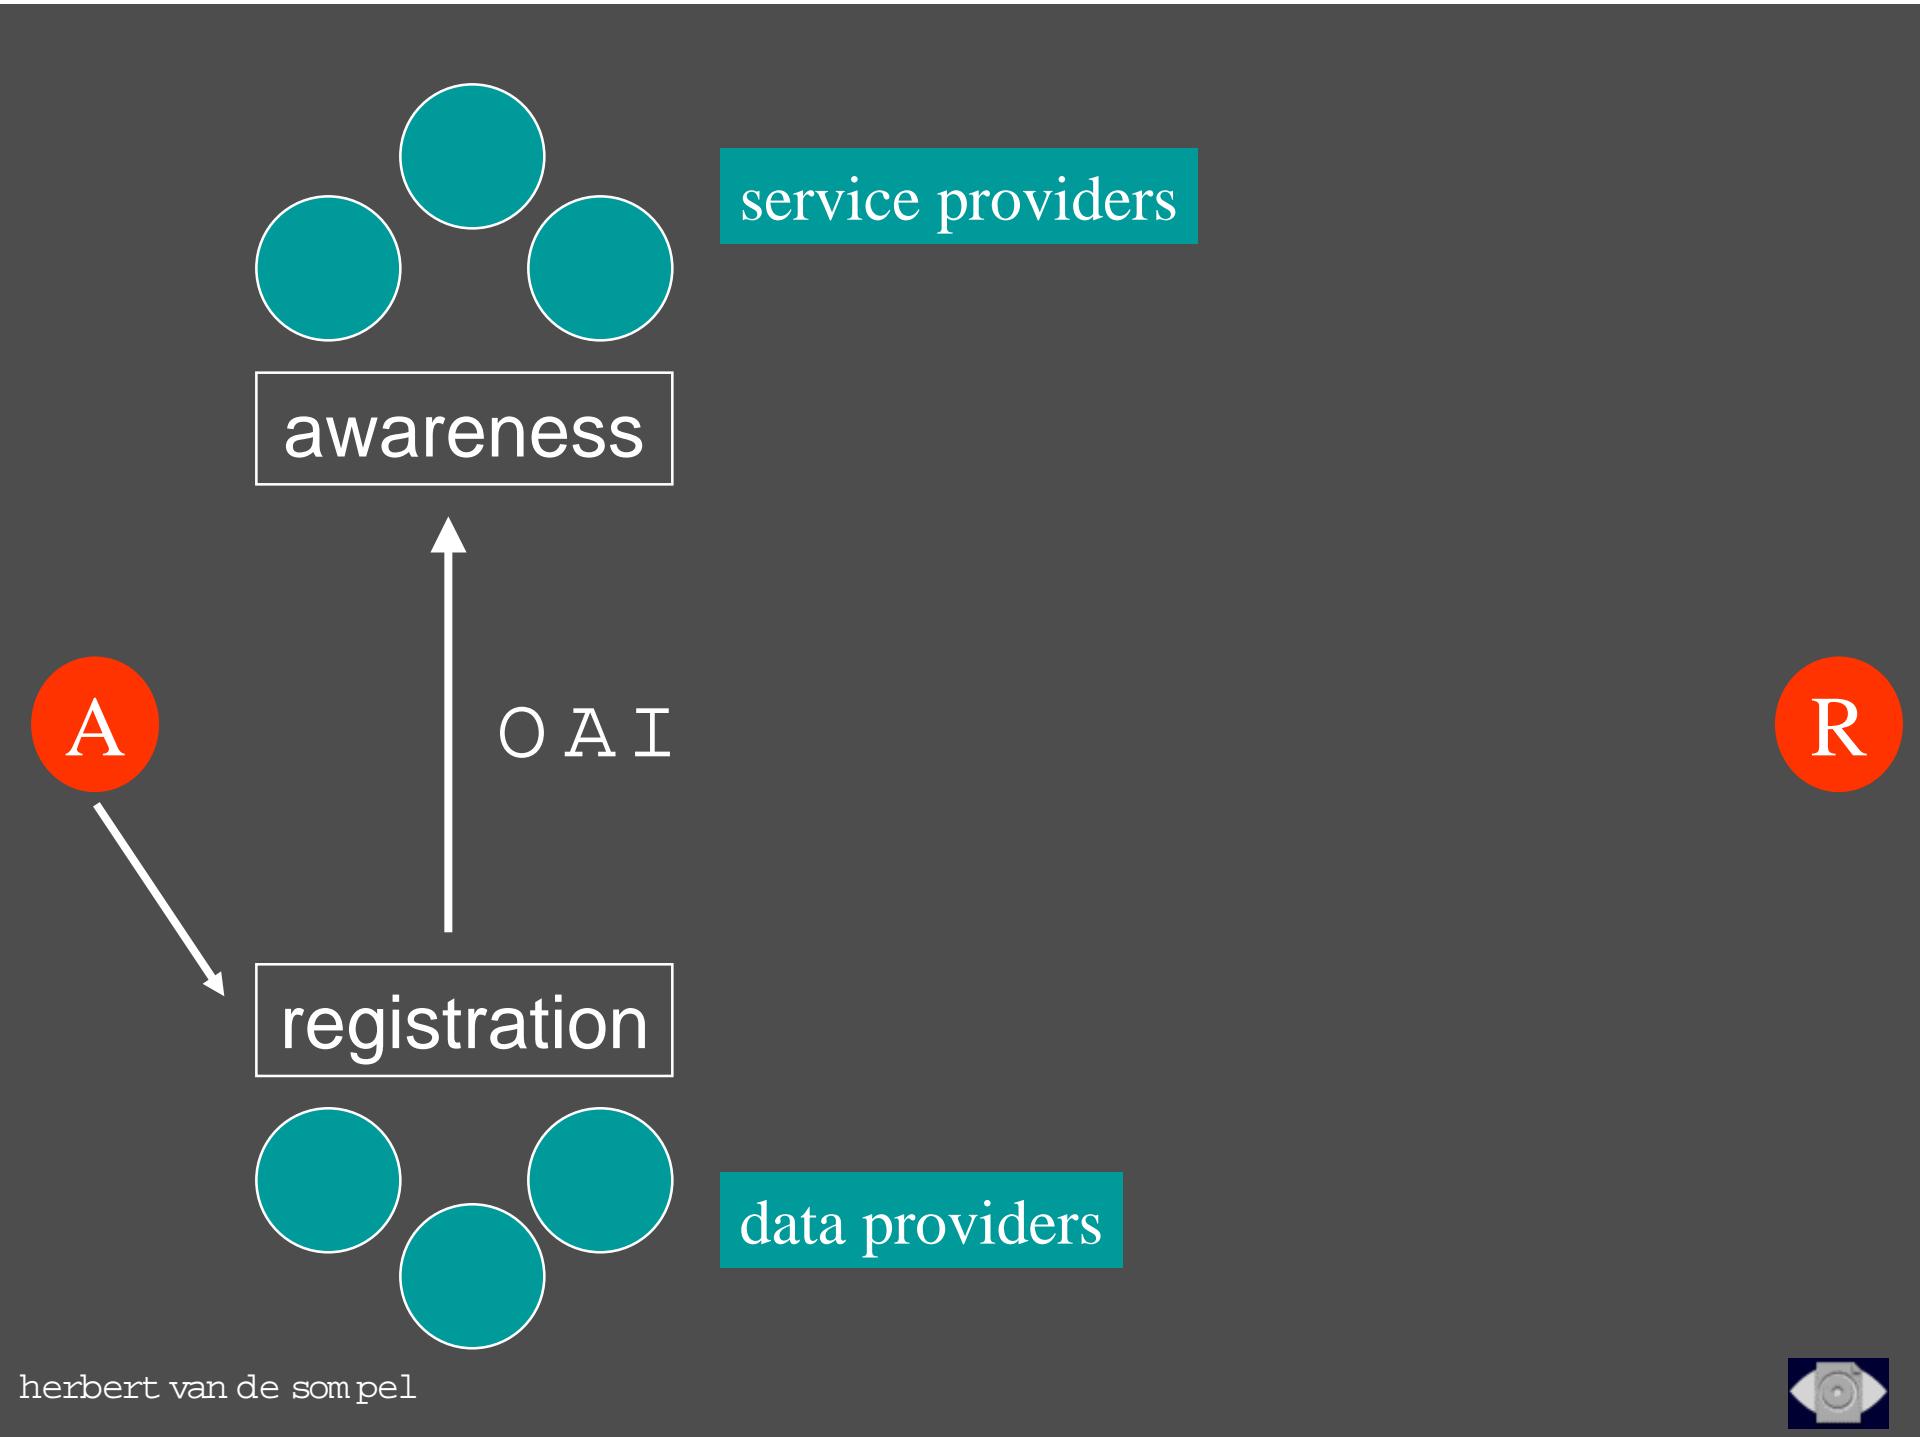

- is distributed
- is done by different parties
- It would be interesting if information that is the result of performing the functions could travel across the system
- Such information would probably be metadata

=> Interoperable grid connecting the functions

Data

awareness

certification

Certification meta
Data

- Can OAMH protocol be of any help
- With as little changes as possible?

Two approaches re certification information:

- Collection level certification metadata
 - description container in reply to OAI Identify verb
- Item level certification metadata: ?

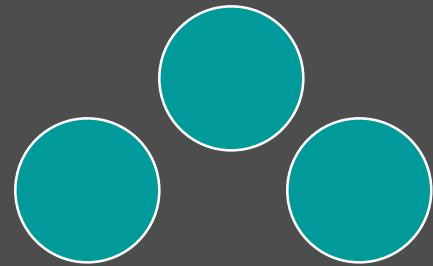

A

registration

ID Discovery meta
Data

awareness

certification

From repository to certification service:

- ID transferred via explicit author action
 - author e-mail
 - Using function of repository (cf ChemWeb)
- ID OAI-harvested by certification service (datestamp)

A

awareness

certification

Certification meta **N ID**
Data

From certification service to others:

- **N ID** OAI-harvested by others
- OAI-harvest is Datestamp based
- **N ID /ID** connection must be explicit in harvested records

registration

ID Discovery meta
Data

Architectural Representation of different types of metadata

Architectural Representation of different types of metadata

- Modularity
- Complexity to agree on a one-size-fits-all format
- Natural fit with OAI concept of parallel metadata formats / metadata format identifiers
- Even multiple certification-related metadata records

discovery

certification

archival

usage log

rewarding

ID

Metadata Format for certification data

- Cross-community “header”
- Community-specific “body”
- Header:
 - original ID
 - Certification agency
 - Date of “manuscript submission”
 - Date of certification
 - Certification-type (it would be great to have a controlled vocabulary)
 - certification-status

- Can OAMH protocol be of any help?
 - yes
- With as little changes as possible?
 - yes

Could actually be tested in:

- arXiv
 - JHEP
 - APS
 - SLAC/SPIRES
- ZentralBlatt für Mathematik (certifying certified material)
- CERN certification process
