WHY PTOLEMY? HISTORY 101

The museum Ptolemy established in Alexandria was in effect the first university in the world.

It was dedicated to the service of the Muses. It was a religious body only in form, in order to meet the legal difficulties of endowment in a world that had never foreseen such a thing a secular intellectual process.

It was essentially a college of learned *men* engaged chiefly in research and record, but also to a certain extent teaching.

A COMMUNITY OF MEDICAL CURIOSITY

In order to improve the health of people in the developing world, it is important that researchers there have access to the peer-reviewed medical literature originating in the developed world, as well as to the journals and texts originating all over the developing world.

the need for electronic health information

COMPARISON WITH HINARI

The Health InterNetwork Access to Research Initiative (HINARI) provides free or very low cost online access to the major journals in biomedical and related social sciences to local, non-profit institutions in developing countries.

HINARI

service product
> 1000 institutions
publisher based
institutions only
broad audience
? uptake
? cost

PTOLEMY

research product
150 individuals linked to UofT
library based
home access
well defined users
electronic publishing (Bioline)
low cost & readably replicable

builds a community

PARTICIPANT EXPERIENCES

"Up until I joined the Ptolemy project, I was only using abstracts for my work. This made life difficult, and my publication record to date is not good. The last good paper I published was in 2000, when I finished my PhD. I certainly regretted going back home to Africa as I thought my academic career was over. I now know that I will be up to date, and I will certainly come up with innovative research proposals."

JC (Malawi)

ICOLC

PARTICIPANT EXPERIENCES

"I am writing my dissertation for a masters in public health, and Ptolemy is assisting me at just the correct time."
MS (Tanzania)

"I am very much interested in medical education, especially clinical education. The Ptolemy project helped me to find relevant information about the subject. It should be noted that, due to financial difficulties, we do not subscribe to any medical education journals."
PG (Mozambique)

Our library is poor in Lusaka, Zambia—no journals or books. Ptolemy opened for me a new world of knowledge. Like a child in a toy shop. It is difficult to stop once you start browsing. Unfortunately internet connection is often very poor, and downloading or opening a page is difficult. That is the time when I stop. Preparing a lecture in wound healing, I performed almost entirely from Ptolemy."
GJ (Zambia)
