McGill student wins fight over anti-cheating website

Last Updated Fri, 16 Jan 2004 11:11:57 EST
CBC News

TORONTO - A student at McGill University has won the right to have his assignments marked without first submitting them to an American, anti-plagiarism website.

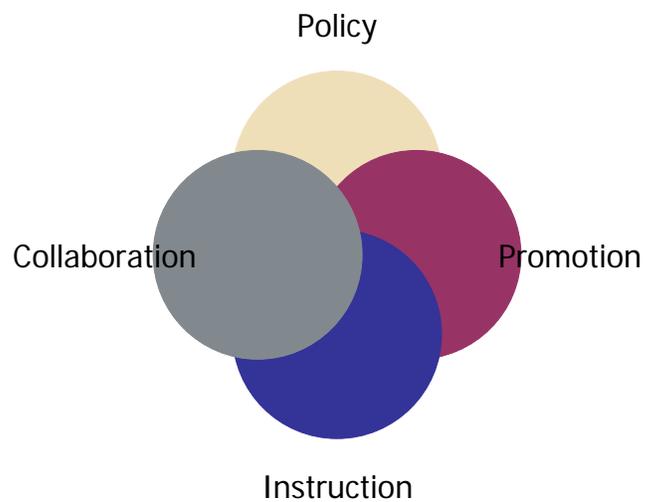

Jesse Rosenfeld refused to submit three assignments for his second-year economics class to Turnitin.com, a website that compares submitted works to other student essays in its database, as well as to documents on the web and published research papers.

Truth in Education

[Academic Integrity Week](#)
 January 24-28, 2005

Special thanks to all sponsors and participants and congratulations to the contest winners!

Welcome to the Academic Integrity page for the University of Alberta. Without Academic Integrity, an educational institution would suffer complete failure. At the University of Alberta, our top priority is to maintain the integrity of the degrees we offer. To that end, we have created the Truth*In*Education program. It is designed to promote integrity in all educational activities, including learning, teaching, research and community events.

The University of Alberta is proud to be an institutional member of the Center for Academic Integrity.

Policy for use of text-matching software at McGill

Following a trial use of one text-matching software during the winter and fall terms of 2003, and numerous consultations, the Academic Integrity Subcommittee, a Subcommittee of the Committee on Student Affairs (CSA), advised (a) that McGill adopt a formal policy affirming that it may take all reasonable means to verify the originality of students' submitted work and (b) that McGill permit the use of text-matching software under certain conditions. Moreover, the Subcommittee recommended a clear distinction between the possible use of text-matching software as a means of investigating suspected plagiarism and its routine use in courses.

On December 13, 2004, the Board of Governors of McGill University approved a policy on the use of text-matching software as well as two accompanying policies regarding implementation.*

Policy for the use of text-matching software
Excerpt from Senate Document # D04-32

A. McGill University should obtain an institutional license for the use of text-matching software that meets the approval of the CSA. In selecting the software, McGill University shall assure itself that the intellectual property rights of users are protected.

B. The Policy and Procedures for Use of Text-matching Software as a Means of Investigating Suspected Plagiarism shall be followed at McGill (D04-33).

C. The Policy and Procedures for Use of Text-matching Software as a Means of Investigating Suspected Plagiarism shall be followed at McGill (D04-33).

D. The University shall not use text-matching software to check their students' submitted written work to text-matching software.

McGill University Academic Integrity Subcommittee on Student Affairs. (7 February 2005). *Text-matching software*. Available from: <<http://www.mcgill.ca/integrity/textmatching/>> [30 March 2005].

Turnitin.com >

Turnitin.com

McMaster has purchased an institutional membership with Turnitin.com, a web-based service that detects internet plagiarism. Turnitin is a technological response to a plagiarism problem that is getting worse because of the technology of the web. Turnitin has three advantages over other services:

1. The students submit their own work to Turnitin, saving the instructor and/or TA the time of doing a Google search;
2. As students are submitting their own work, they are aware a detection service is in use and may decide not to plagiarize; and
3. Turnitin searches the entire assignment for plagiarism rather than selected passages.

How does Turnitin work?

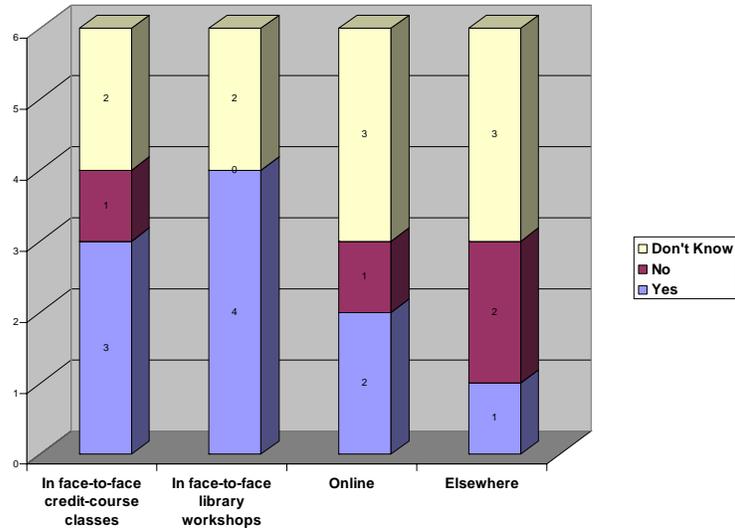

The instructor notifies students that Turnitin will be used in the course outline (see section Language for Course Outlines). Students submit their assignments/work electronically to Turnitin.com where it is checked against the Internet, published works and Turnitin's database for similar or identical work. If Turnitin finds similar or identical work, a report is sent to the instructor showing the student's work and the original source. The instructor reviews what Turnitin has found and then determines if s/he thinks there is a problem with the work.

Guide to Plagiarism and Cyber-Plagiarism

Although plagiarism has been around as long as students have, the Internet has dramatically increased the ease of and opportunities for plagiarism. "Cyber-plagiarism" is the term used to describe the process by which students either copy ideas found on the Web without giving proper attribution, or the process by which students download research papers from the Web, in whole or in part, and submit the paper as original work. The phenomenon of cyber-plagiarism is affecting Universities around the globe.

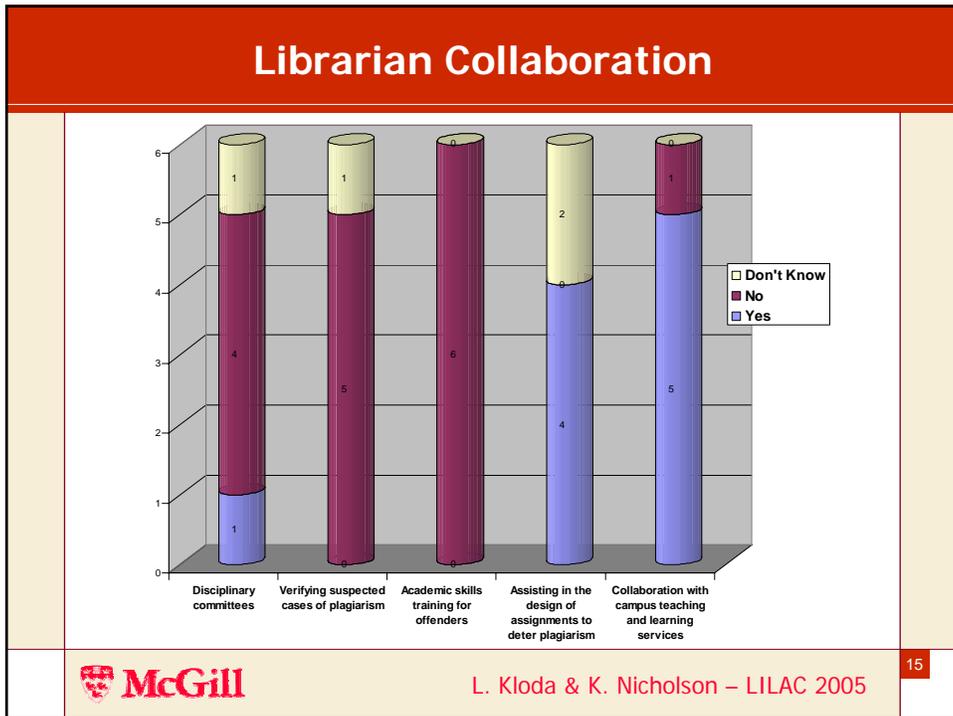

- In a 1999 survey of American students conducted by the *Center of Academic Integrity* at Duke University, 68% of the 2,100 students polled said that they had committed at least one academic offence such as plagiarizing (Quan F1).
- Larry McKill, the Associate Dean of Arts, Student Programs at the *University of Alberta*, estimates about 70 people were proven to have plagiarized during the academic year 2000 in the Faculty of Arts (Gold F1).
- During the same year, at the University of Ottawa, 18 students in the faculty of arts and sciences were disciplined for plagiarism; Carleton University reported 50 cases of plagiarism; and at the University of Toronto over 200 cases of plagiarism are reported each year (Quan F1).
- Most university administrators believe that the number of unreported cases of plagiarism far exceeds reported numbers (Quan F1).

The purpose of this web site is to examine the issues of plagiarism and cyber-plagiarism and what faculty can do to prevent, detect, and report plagiarism.

Please email any comments or questions to: anna.bombak@ualberta.ca

Comments re: Collaboration

- “We present a workshop for the Teaching Assistant Training Programme on supporting undergraduate research. In this workshop, one of the topics we touch on is plagiarism, why students do it, and strategies to prevent it. We also present a workshop for the Office of Teaching Advancement for Faculty on similar themes.”
- “Disciplinary committee members are members of the academic staff so librarians could be members (in fact, there is one right now). A position for a librarian is not 'reserved', however.”
- “I think librarians would be happy to help professors design better assignments but I don't know if any are actually doing this at the moment.”
- “We hope to work collaboratively in the future.”

Strategies to reduce cheating and plagiarism

Cheating and plagiarism by any student hurts all students, because anything that undermines the evaluation process undermines the integrity of our degrees. Therefore, it is important for instructors and TAs to take measures to promote academic integrity and to deal appropriately with instances of academic dishonesty.

By the direction of Senate (January 29, 2003), all course outlines must include the following statement:

McGill University values academic integrity. Therefore, all students must understand the meaning and consequences of cheating, plagiarism and other academic offences under the Code of Student Conduct and Disciplinary Procedures (see www.mcgill.ca/integrity for more information).

For other specific suggestions, see the following:

- [Prevention of cheating on multiple-choice and midterm examinations](#)
- [Reducing plagiarism on lab reports, assignments, and term papers](#)
- [Prevention of plagiarism on term papers](#)
- [What to do when](#)

Comments and suggestions are welcome.

Student to Scholar Research and Writing Tutorial

What is the Student to Scholar Program?

It is a collaborative project of the [UBC Library](#) and the [UBC Writing Centre](#). The goal of the program is to help students avoid plagiarism - both intentional and unintentional - by providing them with the conceptual knowledge and practical skills for scholarly writing and research.
