

Reconfiguring Collection Development for the Future Audrey Powers

Reconfiguring collection development, what does that mean? How is collection development reconfigured? We are all familiar with various standard methodologies to “do collection development”; the more money you have, the more materials you can buy, and the greater the collection. However, academic libraries are dealing with rising operational costs that are disproportionate to their budgets and this has a significant effect on collection development. What is needed is a new paradigm for collection development.

At some point within the past ten years, the University of South Florida recognized it was growing and expanding from an undergraduate teaching institution to a research institution and with that the library administrators recognized we needed to change. With a strong commitment to research, USF is driven to become a top research institution, “the top 50 in 5”. The goal is to be ranked as one of the top fifty research institutions in the United States within five years. Currently the university is ranked sixty-three for public research universities as designated by the Carnegie Foundation for the Advancement of Teaching. With more than \$310 million in funding from research contracts and grants it is ranked by the National Science Foundation as one of two of the nation’s fastest growing universities in federal research and development expenditures. The university serves 44,000 students on campuses in Tampa, St. Petersburg, Sarasota/Manatee and Lakeland. ¹

Naturally, it is crucial the library provide the resources and services required for all researchers at the university. As a result, the library has undertaken a new initiative to redefine its organizational structure for collection development. In addition to redefining the organizational structure, new processes are being implemented in order to build collections of distinction that are linked to the institutional research agenda. It is a data driven approach that is the basis for selective collection assessment and development.

Historically, two standing committees were the driving force for the collection development initiatives and processes, the Collection Development Advisory Committee (CDAC) and the Electronic Resources Committee (ERC). There were, and still are, twenty-four collection development librarians covering sixty-four disciplines.

During the summer of 2005, the library administration created a new department called “Research Services & Collections”. Any librarian from Reference & Instruction that wanted to join the group was welcome to do so; two librarians joined the group. Since then four other librarians have been hired and we are about to recruit another librarian. The Head of Collection Development became the group leader. As the development of this department took shape, the

paradigm began to shift to an emphasis on data collection and analysis and the integration of all collection formats.

As illustrated, the Library Administration is at the core of the group with primary responsibility for approval of planning documents, providing strategic directions, and approval of resource allocations (figure 1). Members of this core group include the Dean of the Tampa Libraries, Director of the Tampa Library, Director of Special Collections and Director of Technical Services (now Director of Collection Assessment and Technical Services).

The next layer is the Technical Services/Public Services group (figure 2). Up to this point, the organizational structure is unaffected. The Technical Services/Public Services Group's roles and membership are clarified in this new role; provide recommendations to library administration, test and refine strategic directions, unify and articulate approved goals and objectives, remove obstacles and coordinate process. The Associate Directors (ADs) represent Reference & Instruction, Access & Media Services, Technical Services and Collection Analysis.

In the following illustration (figure 3), the newly created team *Research Services & Collections*, or "Council", comes into play. We are a group of librarians who have expertise in various disciplines. Our roles and responsibilities include acting on collection analysis, coordinating collection development activities, developing research services, and advancing strategic directions. The Councilors are co-chaired by the Director of the Tampa Library and the Director of Collection Analysis and Technical Services. This new group supersedes the older Collection Development Advisory Committee (CDAC) and Electronic Resources Committee (ERC).

The next layer is the Collection Development librarians (figure 4). All collection development librarians are under the leadership of one of the Councilors. Their responsibilities are to liaise with the faculty, execute collection development activities, deliver research services, collaborate with councilors, and to serve on collection analysis project teams.

The Format Coordinators include the librarians responsible for serials, media, GIS, information technology and electronic resources (figure 5). Their roles are to collect data and conduct analysis, advise the Research Services & Collections Council on assessment strategies and methods, and to serve on collection analysis project teams.

Thus, the Research Services & Collections Council is at the intersection of the three major components of the library; Special Collections, Technical Services, and Public Services. The format coordinators are from Technical Services and the Councilors are drawn from both Special Collections and Public Services. Clearly, this effort is intended to integrate all departments and units within the

library with a common purpose: to address the information needs of researchers (figure 6).

The expectations of the Council are tied directly to building collections and services worthy of benchmarking by ARL libraries and linked to advancing institutional research agendas and strategic directions. Using data analysis, this approach is a selective approach to collection management. These expectations have become the mission of the Council.

This describes the organizational restructuring that took place. After it was implemented the Council plunged into a carefully designed, three step analytical process. The Council members were asked to define the library context and the institutional context and to assess the collections each councilor is responsible for.

Step 1, ***define the library context***. This was a self-examination in which key personnel, key processes, potential obstacles, resource needs, collection integration strategies and internal communication channels and reporting procedures were defined. Through this self-examination any barriers that could prevent the Council from being effective were identified. Some of the obstacles discovered in retrospect were painfully obvious. For example, one identified barrier was the lack of sufficient collection analysis tools. The obvious solution was to purchase additional tools. Another obstacle discovered was the lack of common knowledge among librarians and staff about this new initiative. This was solved simply by improving communication.

Step 2, ***define institutional context***. The Councilors were asked to define the institutional context and as a starting point were given possible strategies and potential sources of data. The possible strategies included key players, areas of research emphasis (current and future), teaching emphasis, grant activity, program ranking(s), institutional impact, and awards earned and sought. Various sources of data were recommended for use which included both internal and external sources such as the Planning, Performance and Accountability Model (internal), National Research Council (external), Planning & Analysis (internal), InfoMart (internal) and Top American Research Universities (external). Of course, other sources were incorporated into a decision matrix.

The Councilor for the Natural Sciences gathered data for each discipline in the sciences; biology, chemistry, environmental sciences & policy, geology, mathematics and physics, which enabled her to clarify the institution's research strengths and the interdisciplinary focus of these disciplines at this institution. By contrast, the librarian for the College of Visual and Performing Arts identified "top" researchers and programs using Google. It was surprising that this approach was so productive, but her goal was to find out who in the Arts at USF are notable names within their fields.

Step 3, **assess collections**. The Councilors applied what was learned in Step 2 to identify collection targets, collections that need work, and collections that are below par with the needs of the researchers in that discipline. Possible strategies were identified by the co-chairs and included the following:

- Identify collection targets
- Field assessment teams
- Collaborate with Format Coordinators
- Implement assessment protocol
- Document results

Potential tools for this analysis were identified, but not limited to, the following:

- WorldCat Assessment Tool
- Journal Citation Reports
- Electronic Resource Management System
- Ulrich's Serials Analysis System

Some of the collection assessment recommendations yielded results that were remedial in nature or simply needed organizing. For example, the Education councilor recommended a test collection task force be created to conduct a comprehensive assessment of the test collections on campus. The Natural Science Councilor identified the peers and aspirants nationally for the College of Marine Science. Up until this point we only had the WorldCat Collection Analysis tool for the southeastern United States, but with the Council's recommendation the full WorldCat Collection Analysis Tool has been purchased and a thorough analysis of our aspirants for the College of Marine Science collection will be conducted. Additional journals and databases, hardware, software and personnel were identified while working with the College of Marine Science faculty on several grants. A deeper understanding of their research endeavors occurred as a result of these processes. The Councilor for the Social Sciences identified a number of steps to manage and enhance the collection to meet the research needs of the Anthropology and Psychology Departments. He identified base data, general departmental data, benchmarks, and a method to analyze departmental scholarly communication from which he was able to set collection goals and strategies. He also was able to determine a remedial component to this project as well. Collecting materials for Mesoamerican studies would greatly enhance the research and instruction efforts for the Anthropology Department which in turn would greatly aid the interdisciplinary research in Latin American and Caribbean Studies.

As a result of Steps 1 through 3, various tools and analyses were created and discovered:

Tools for CD Librarians

A web page devoted to Tools for CD Librarians which includes statistics, reports, information regarding accreditation, costs & trends, usage statistics, analytical tools, and general tools. It provides a common point for information on collection development related to the USF Library (figure 7).

http://www.lib.usf.edu/techservices/CD_tools/index.html

Decision Matrix

As a result of all of this work, the co-chair was able to combine all of the sources used to gather the data into a “decision matrix”. This is the one of the primary tools we now use in decision-making. The criteria, dimensions and definitions provide a roadmap to evaluate disciplines and collections. URLs link you to the actual documents needed for discipline-specific information. Completing this matrix provides us with the information and reasons needed to purchase materials for a specific discipline (figure 8).

http://www.lib.usf.edu/techservices/CD_tools/docs/RSC-Decision-Matrix.pdf

Step 2 for the Sciences

The analysis for the Sciences during the Step 2 process identifies the number of students and programs for each level (undergraduates, masters, PhD), total number of students, total research dollars and number of current grants were contributing factors for the final analysis.

Marine Science was identified as a top program because of the number of faculty (65), the ratio of students to faculty (1:1), the number of grants (142) and the total dollars (78.5 million) brought in with grants.

Legislative Budget Request

The Science Librarian was asked to prepare information for a Legislative Budget Request. Consulting with the Associate Dean and various faculty she was able to put together a proposal for a marine bioinformatics resource center to “manage and interpret large data sets results from the application of the modern tools of biology to the ocean sciences”. Included in this proposal are the traditional library resources such as journals and databases, but also hardware, software and personnel.

21st Century World Class Scholars

This grant was one of seven submitted to the Florida Board of Governors. Holdings supporting Marine Science Research and associated expenditures were presented as a proposal including the hiring of an internationally recognized scholar in the field of Oceanography and Climate change. Working in collaboration with colleagues from USF in Engineering, Medicine, Physical Sciences, and Life Sciences and scientists from other institutions such as the U.S. Geological Survey and the National Marine Fisheries Service, the College of

Marine Science faculty have established a strong global reputation in research innovation, coastal and environmental protection, global warming, extreme weather events, water quality, public health and homeland security.

The reorganization, and subsequent processes, spurred a lot of creative thought. Other projects the Council is currently working on include:

The Social Sciences Librarian and the GIS Librarian are working with a Library Science class on a Library Collection Survey in the Social Sciences. This is taking place over two semesters and employs the same group of students.

Materials for the College of Business Administration have been identified and funded with \$125,000 worth of purchases.

The Councilor for the Natural Sciences has put together a team to investigate the information needs of researchers, both graduate students and faculty, in the Sciences.

The Library Dean put together a series of meetings, called “The Larger Picture”, with administrators from around campus, such as the Vice President for Research. This gives the Council the opportunity to understand the larger picture as well as put our efforts into the context of the research initiatives campus-wide. Additionally, one of the Councilors is putting together a session with a panel of researchers and other Council members plan to invite the Outstanding Faculty Research Achievement Awards recipients to a luncheon to discuss their research.

The Career and Workforce Education project is a collection analysis initiative being put forth by the Education Librarian that will identify resources needed to support a PhD program in career and workforce education.

With only one year into this project, it is clearly still in its infancy, but it definitely has had an impact on the way the library does business and the scope and quality of library resources and services.

Note: The Dean of the Library's administrative staff is responsible for the restructuring that took place which will enable the Library to move forward building collections of distinction and the delivery of customized services.

Figure 1

Organizational Adjustments

LA

Library Administration

Roles:

- Approval of planning docs
- Provide strategic directions
- Approve resource allocations (fiscal/personnel)

Members:

- Dean
- Director, Tampa Library
- Director, Special Collections
- Director, Technical Services

Figure 2

Organizational Adjustments

Technical Services/ Public Services Group

Roles:

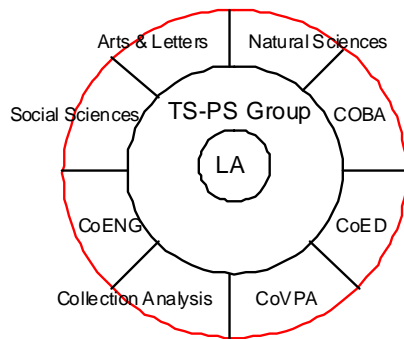

- Provide recommendations to LA
- Test/refine strategic directions
- Unify & articulate approved goals & objectives
- Remove obstacles
- Coordinate process

Members:

- Library Administration plus ...
- AD Research Services/Collections
- AD Reference & Instruction
- AD Access & Media Services
- AD Technical Services
- AD Collection Analysis

Figure 3

Organizational Adjustments

Research Services & Collections Council

Roles:

- Act on collection analysis
- Coordinate CD activities
- Develop research services
- Advance strategic directions
- Supersedes CDAC/ERC

Co-chaired by the Directors of the Tampa Library & Collection Analysis/Technical Services
